Corrosion Composites Overview

Corrosion Resistant Fiberglass Reinforced Plastic Products By Monoxivent... Strong, Versatile Solutions

Corrosion Composites by Monoxivent is a leading source for corrosion resistant fiberglass reinforced plastic (FRP) fabrication. Our FRP products are used in many industrial, water, wastewater, underground, and applications where corrosion is a problem.

Fiberglass Composite Qualities:

- Light Weight
- High Strength
- Non-Conductive
- Corrosion Resistant

Typical FRP Applications:

- Duct
- Hoods
- Stacks
- Pipe
- Platforms
- Tanks
- Scrubbers
- Custom Items

Our fiberglass plastic products are designed and fabricated in accordance with industry standards providing the end user with dependable quality solutions and the right material of choice for a given application. Monoxivent's manufacturing source provides over 70,000-sq. feet of production space, modern equipment and over 40 years of experience within the FRP industry. Monoxivent brings together its years of experience and manufacturing expertise by assisting with design, engineering, drawing, manufacturing, inspection and installation of our high quality reinforced plastic products.
